

Innov@zione.PA focuses on the digital execution that modernises Central and Local Public Administration models and processes.

The bimonthly magazine illustrates the scenario of the implementation of many initiatives, from the more solid ones to those that are still experimental. Despite their autonomy, the contrasting elements that are often typical of changing situations and the limited resources, their aim is to make the Country grow, passing through an essential innovation of Public Administration.

The core sections of Innov@zione.PA 2017 publishing plan are:

Report, at the beginning of the magazine, stresses the importance of the evolution of the context starting from news reports. It features articles on events, ongoing legislative processes, studies provided by different institutional actors, professional organizations and research centres.

In **Technological Scenarios**, Companies and Public Administrations together provide an overview of the needs and of the latest developments in those different ICT fields that are fundamental for PA transition process.

Dossier, section dedicated to the analysis of the main innovative projects of the Country.

In closing **Smart Communities**, solutions for PA innovation implemented in cities and territories.

ROUND TABLES AND ROADSHOWS

Centre, Territory and Business. Live debates on the most current topics of digital transformation with decision-makers and IT professionals in the Italian regions.

Innov@zione.PA organizes and promotes a series of Round Tables aimed at understanding priorities, models and solid possibilities of pursuing innovative strategies locally, given the current economical and political scenario.

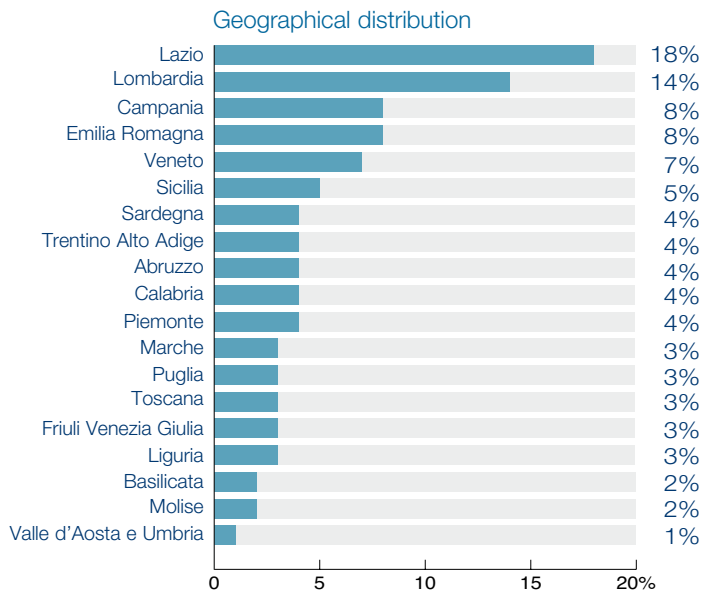

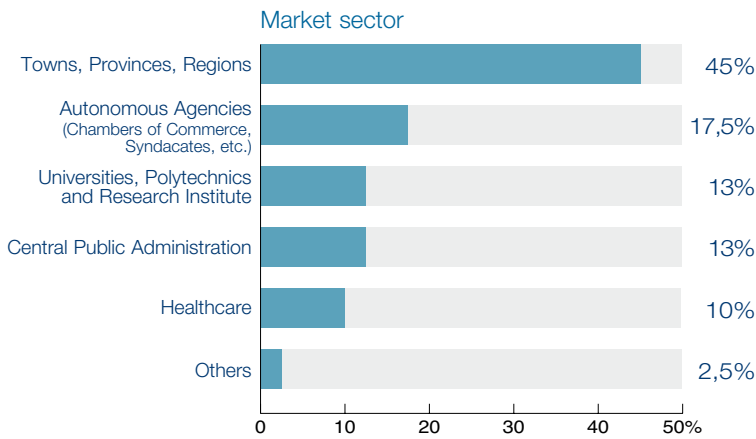

Given the good feedback received during the events organized in 2015 and 2016, in 2017 these important knowledge-sharing meetings for innovators will be structured as a **Roadshow** in many Italian cities.

For further information on the Roadshow:
